Preparing BERTModel Classes

In [18]:

```
Model_Used = "UBC-NLP/MARBERT"
Task_Name = "classification"

class Dataset:
    def __init__(
        self,
        name,
        train,
        test,
        label_list,
    ):
        self.name = name
        self.train = train
        self.test = test
        self.label_list = label_list

class BERTModelDataset(Dataset):
    def __init__(self, text, target, model_name, max_len, label_map):
      super(BERTModelDataset).__init__()
      self.text = text
      self.target = target
      self.tokenizer_name = model_name
      self.tokenizer = AutoTokenizer.from_pretrained(model_name)
      self.max_len = max_len
      self.label_map = label_map

    def __len__(self):
      return len(self.text)

    def __getitem__(self,item):
      text = str(self.text[item])
      text = " ".join(text.split())

      encoded_review = self.tokenizer.encode_plus(
      text,
      max_length= self.max_len,
      add_special_tokens= True,
      return_token_type_ids=False,
      pad_to_max_length=True,
      truncation='longest_first',
      return_attention_mask=True,
      return_tensors='pt'
    )
      input_ids = encoded_review['input_ids'].to(device)
      attention_mask = encoded_review['attention_mask'].to(device)

      return InputFeatures(input_ids=input_ids.flatten(), attention_mask=attenti
on_mask.flatten(), label=self.label_map[self.target[item]])
```

Defining Needed Methods for training and evaluation

In [19]:

```
def model_init():
  return AutoModelForSequenceClassification.from_pretrained(Model_Used, return_d
ict=True, num_labels=len(label_map))

def compute_metrics(p): #p should be of type EvalPrediction
  preds = np.argmax(p.predictions, axis=1)
  assert len(preds) == len(p.label_ids)
  print(classification_report(p.label_ids,preds))
  #print(confusion_matrix(p.label_ids,preds))

  macro_f1_pos_neg = f1_score(p.label_ids,preds,average='macro',labels=[1,2])
  macro_f1 = f1_score(p.label_ids,preds,average='macro')
  macro_precision = precision_score(p.label_ids,preds,average='macro')
  macro_recall = recall_score(p.label_ids,preds,average='macro')
  acc = accuracy_score(p.label_ids,preds)
  return {
      'macro_f1' : macro_f1,
      'macro_f1_pos_neg' : macro_f1_pos_neg,
      'macro_precision': macro_precision,
      'macro_recall': macro_recall,
      'accuracy': acc
  }

def set_seed(seed):
    torch.manual_seed(seed)
    torch.cuda.manual_seed_all(seed)
    torch.backends.cudnn.deterministic = True
    torch.backends.cudnn.benchmark = False
    np.random.seed(seed)
    random.seed(seed)
    os.environ['PYTHONHASHSEED'] = str(seed)
```

Build Train and Evaluation Data Sets

In [20]:

```
label_list = list(train_set[Tweets_Sentiment_Col_Train].unique())

print(label_list)
print(train_set[Tweets_Sentiment_Col_Train].value_counts())

data_set = Dataset( "ArSAS", train_set, evaluation_set, label_list )

label_map = { v:index for index, v in enumerate(label_list) }
print(label_map)

train_dataset = BERTModelDataset(train_set[Tweets_Text_Col_Train].to_list(),
                                 train_set[Tweets_Sentiment_Col_Train].to_list
(),Model_Used,Max_Len,label_map)

evaluation_dataset = BERTModelDataset(evaluation_set[Tweets_Text_Col_Train].to_l
ist(),
                                      evaluation_set[Tweets_Sentiment_Col_Train]
.to_list(),Model_Used,Max_Len,label_map)
```

```
['Neutral', 'Negative', 'Positive', 'Mixed']
Negative    6225
Neutral     5824
Positive    3698
Mixed       1049
Name: Sentiment_label, dtype: int64
{'Neutral': 0, 'Negative': 1, 'Positive': 2, 'Mixed': 3}
```

Define Training Arguments

In [21]:

```
#define training arguments
training_args = TrainingArguments("./train")
training_args.lr_scheduler_type = 'cosine'
training_args.evaluate_during_training = True
training_args.adam_epsilon =1e-8
training_args.learning_rate = 1.78255000000000001e-05 # use this with org data
training_args.fp16 = True
training_args.per_device_train_batch_size = 16
training_args.per_device_eval_batch_size = 128
training_args.gradient_accumulation_steps = 2
training_args.num_train_epochs= 2
training_args.warmup_steps = 0
training_args.evaluation_strategy = EvaluationStrategy.EPOCH
training_args.logging_steps = 200
training_args.save_steps = 100000
training_args.seed = 42
training_args.disable_tqdm = False
```

Build The Trainer

In [22]:

```
training_args.dataloader_pin_memory = False
gc.collect()
torch.cuda.empty_cache()
set_seed(Rand_Seed)

trainer = Trainer(
    model = model_init(),
    args = training_args,
    train_dataset = train_dataset,
    eval_dataset= evaluation_dataset,
    compute_metrics=compute_metrics
)

print(training_args.seed)
```

```
Some weights of the model checkpoint at UBC-NLP/MARBERT were not use
d when initializing BertForSequenceClassification: ['cls.prediction
s.bias', 'cls.predictions.transform.dense.weight', 'cls.predictions.
transform.dense.bias', 'cls.predictions.transform.LayerNorm.weight',
'cls.predictions.transform.LayerNorm.bias', 'cls.predictions.decode
r.weight', 'cls.seq_relationship.weight', 'cls.seq_relationship.bia
s']
- This IS expected if you are initializing BertForSequenceClassifica
tion from the checkpoint of a model trained on another task or with
another architecture (e.g. initializing a BertForSequenceClassificat
ion model from a BertForPreTraining model).
- This IS NOT expected if you are initializing BertForSequenceClassi
fication from the checkpoint of a model that you expect to be exactl
y identical (initializing a BertForSequenceClassification model from
a BertForSequenceClassification model).
Some weights of BertForSequenceClassification were not initialized f
rom the model checkpoint at UBC-NLP/MARBERT and are newly initialize
d: ['classifier.weight', 'classifier.bias']
You should probably TRAIN this model on a down-stream task to be abl
e to use it for predictions and inference.
```

```
42
```

Train

In [23]:

```
all_results = []

print(Max_Len)
print(training_args.learning_rate)
print(training_args.adam_epsilon)
print(training_args.warmup_steps)
trainer.train()

results = trainer.evaluate()
all_results.append(results)
print(results)
```

```
